STOPS PLASTIC BUILDUP IMPROVES DRYER EFFICIENCY
ENERGY SAVINGS REDUCE DRYER DOWNTIMES
MORE DRYING LOADS PER DAY

Untreated panel with accumulated plastic

Top Portion Treated with **PlasticRepel**

PLASTICREPEL****

WILL REDUCE DRYING TIMES
WILL INCREASE DRYER EFFICIENCY
WILL REDUCE MAINTENANCE LABOR

Workers are often rushed when collecting sheets and gowns for laundry, and inadvertently collect plastic from diapers, pads and tape. The plastic melts onto steel perforated dryer baskets to such an extent that it has to be chipped off with a chisel.

Within a 3-4 day period the melted plastic will block the basket perforation so much that drying cycles can be reduced from 26 to 18 loads per day. With one-third fewer drying cycles, laundries incur approximately 30% higher cost for labor, power usage, downtime and increased wear.

Applying **PlasticRepel** keeps plastic from sticking to the dryer baskets keeping the dryers running at peak efficiency.
